

Armor-Coat

Stainless steel flakes with a polyurethane binder

ARMOR-COAT is a super tough coating containing pure stainless steel pigment in a durable resin system. Seals, beautifies and protects metal, wood, ceramics and more. When applied, the stainless steel flakes rise to the surface of the coating, forming a rust and corrosion proof layer of tough durable metal, while the binder protects the object underneath. **ARMOR-COAT** provides maximum protection against damage by ultraviolet lights, abrasion, harsh environments and heat up to 900° F. Tack free in 5 minutes, hard cure in 2 hours. Great for flashing, fencing or hand rails that rust and need to be painted often due to wear and tear. If fencing or flashing has rusted all over concrete buildings and walkways, use Omega's **CON RENEW** to remove rust stains, then treat with **ARMOR-COAT** so the area will not rust again! If there are areas of rust that cannot be removed, use Omega's **RUST X** to convert area to a paintable surface.

Directions: Clean surface with degreaser such as Omega's **MEGA POWER** or **POW** to ensure surface is free from oil and dirt. For ultra heavy duty corrosion protection, apply **ARMOR-COAT** over a well cured coating of Omega's **COLD ZINC**. Spray surface with steady, even strokes. Several light coats provide a better finish than 1 heavy coat.

Areas of Use:

- *boilers
- *radiators
- *steam pipes
- *mufflers
- *chain & wire fences
- *heat exchanges
- *HVAC trades
- *aircraft maintenance
- *oil drilling equipment
- *restaurant equipment
- *road equipment
- *processing equipment

Health	2
Flammability	3
Reactivity	1
Protection	B

Appearance and odor.....	Silver grey liquid, solvent
Specific Gravity.....	Concentrate - 1.100
Propellant.....	Liquefied Petroleum Gas
VOC.....	58%
NFPA Fire Rating.....	Extremely Flammable Spray
