

Grease Trap Blocks

Bacteria in suspension for grease traps

GREASE TRAP BLOCKS are easy to use and can be simply tossed into a grease trap to consume grease, fat, oils, food, etc... reducing costs and maintenance needed to keep the trap free flowing and odorless. The block dissolves slowly to release grease eating bacteria for approximately 30 days with no pumps needed and no physical pouring of liquid required. Unlike many liquid bacteria additives that are poured into the trap, **GREASE TRAP BLOCKS** continuously add to the number of bacteria available to consume grease even if chemical cleaners that kill bacteria have entered the trap . Each block contains 23 million bacteria of five different types, per ounce. Biodegradable.

Directions: For best results clean trap before placement of **GREASE TRAP BLOCK**. If this is not possible, double the initial recommended dosage. Put the block in water-do not put in top layer of grease. For traps 30-90 gallons in size, one block will last approximately 30 days. For traps 150-500 gallons use 2 blocks.

Areas of Use:

- *industrial kitchens
- *school districts
- *restaurants
- *large office buildings

Health	1
Flammability	0
Reactivity	0
Protection	A

Appearance and odor.....	Green solid block, Mild Scent
Specific Gravity.....	Concentrate - 1.20
VOC.....	0%
NFPA Fire Rating.....	Non-flammable
