

BUFF BRITE

High-Gloss Liquid Spray Buff

BUFF BRITE is a quality ready-to-use spray buff emulsion designed to provide an instant wet look gloss with the use of conventional high-speed and ultra high-speed burnishing equipment. This easy-to-use product also removes and enhances resistance to scuffs, scratches and black heel marks. **BUFF BRITE** also removes surface soils from any floor surface, including resilient surfaces, such as vinyl, rubber, vinyl composition, asbestos and linoleum tiles, as well as non-resilient surfaces, including quarry tile, unglazed, ceramic and terrazzo tile, which have been previously finished with a layer of thermoplastic finish.

DIRECTIONS

Preparation of floors: The floor surface must contain a base wear coat of 3 to 5 coats of a proven compatible, thermoplastic, floor finish, which has been allowed to cure for a minimum of 24 hours depending on soil conditions. The floor should be either dust mopped if relatively clean or damp mopped, with a free rinsing, neutral detergent and allowed to dry.

Application for spray buffing: For use with all conventional and highspeed floor machines and burnishing equipment at 175 RPM or above. Place the product into a trigger sprayer or other suitable spraying device. Apply a fine mist to a small area directly in the path of the floor machine and immediately buff to a high gloss. A heavier application of the product may be made directly on black heel marks or exceptionally scuffed areas.

Maintenance: Spray buffing can be utilized as a regular procedure in daily floor care. The frequency of spray buffing should allow the floor never to deteriorate to the point where it looks as if it needs re-coating.
