

BATTERY CLEANER

Cleans & Protects
Batteries

BATTERY CLEANER provides a one-step solution to battery terminal corrosion removal and acid neutralization. Delivers a powerful, heavy-duty foam that clings to battery surfaces, provides extended contact time and neutralizes acid quickly. Helps eliminate power leaks and aids in restoring full starting power. Features a low odor, non-flammable, water-soluble formula. **BATTERY CLEANER** contains a unique color indicator that turns red in the presence of acid, then changes back to yellow when the acid is neutralized. Leaves behind a residual film that provides short term corrosion resistance.

DIRECTIONS:

SHAKE WELL BEFORE USING. Be sure cell covers are tightly sealed. Spray on cables, clamps, terminals, brackets, housings and entire battery surface. Product will spray out light yellow and turn red in the presence of acid. Allow foam to work for several minutes, then flush off with water. Follow with a second application. If solution still turns red, acid neutralization process is not complete. Allow to set then repeat. For heavy deposits, agitation with a wire brush may be needed. If sprayed foam remains yellow . . . all acid has been neutralized. Allow product to dry and form residual protective film.
