

BATTERY GUARD

Battery Protectant

BATTERY GUARD is a light misting, purple coating designed to prevent rust, corrosion and battery failure. Provides a long-term protection when applied to battery terminals, cable ends, wires, bolts, brackets, clamps and other metal components. One application is effective for up to 6 months. Proper use keeps batteries clean, prolongs life and helps prevent terminal contact failures. Every new battery installation and service should be completed with an application of **BATTERY GUARD**. Also, great for rust prevention on a variety of other metal surfaces. The distinctive color shows where protection is working. Use on all batteries whether in or out of storage.

DIRECTIONS:

Be sure ignition is off before spraying. Do not apply near hot surfaces. Shake can well before using. Remove cables from battery terminals. Clean all surfaces with battery cleaner. Protect against overspray by covering surrounding areas. Spray terminals with light coating. Replace and tighten cables. Coat metal surfaces with a generous amount from 8-12" away. Wait 5 minutes before starting engine.
