

TRACER

Fluorescent Sewer Tracing Dye

TRACER is a highly concentrated sewer tracing dye that is formulated for use in all types of sewer flow studies and pollution investigations. **TRACER** creates an intense yellow/green color for maximum visibility under a wide variety of conditions. **TRACER** dye contains biodegradable, non-toxic ingredients. When used at the proper dilutions, it is harmless to wildlife, and will not affect the operations of sewer treatment processes. Non-natural color promotes safe use and aids in controlling public reactions. **TRACER** is easily visible under UV light.

DRECTIONS: Apply **TRACER** dye as required for proper study of flow. 1 to 2 gallons will impart visible color to approximately 12,000 gallons of water.

Health	0
Flammability	0
Physical Hazard	0
Protection	-

Areas of Use:

- *Flow Origination Studies
- *Infiltration Studies
- *Pollution Investigation
- *Maintenance Analysis
- *Cities & Counties
- *Water Treatment Facilities
- *Water Management

Appearance	Yellow green liquid
Net Contents.....	1 Pint
