

ALUMINUMMAN

Aluminum-Reinforced
Epoxy Repair Putty

ALUMINUMMAN is a hand-mixable, fast-setting, aluminum-reinforced, non-rusting epoxy putty that quickly repairs or rebuilds anything made of aluminum. After mixing, it forms a polymer compound that can be molded into shapes or used to build up, repair and patch items made of aluminum. **ALUMINUMMAN** is an industrial-strength product that cures tough and hard and bonds tenaciously to metals. Each handy stick contains pre-measured portions of activator and base throughout — no measuring or mixing tools are necessary. The consistency (like modeling clay) eliminates drips and runs, molds easily, and facilitates adhesion to the substrate. After 60 minutes the application can be drilled, tapped, machined, ground, filed and painted. It cures to a light-gray metallic color. Suitable for interior or exterior use, it is resistant to water, chemicals, and temperature extremes. It contains no solvents or VOCs.

DIRECTIONS:

Before applying, roughen and clean the area to be repaired. Wear impervious gloves when mixing or handling uncured **ALUMINUMMAN**. Then follow these easy steps: 1) CUT or twist off required amount. 2) MIX by kneading with gloved fingers to a uniform color. If mixing is difficult, warm **ALUMINUMMAN** to room temperature or slightly above. 3) APPLY to surface to be repaired within 2 minutes of mixing. Force into any cracks or holes, and extend the patch at least one half inch beyond the area being repaired. When applying to a damp, wet or slowly leaking area, work the mixed epoxy putty forcefully into the surface and apply pressure until adhesion begins to take effect. For best results; use damp fingers for easier mixing, application and a smooth appearance of the cured compound. Remove excess material before hardening begins. **ALUMINUMMAN** has a 3 to 5 minute work life. Functional cure occurs in 60 minutes.
