

DISH SANI CHLOR

Liquid Chlorine Rinse
for Low Temperature Dish Machines

DISH SANI CHLOR is a stabilized hypochlorite liquid for use in commercial low temperature ware washing machines. When used with our low temperature machine dish washing liquid it penetrates & cleans grease, fat, egg, milk, lipstick, stains & food residues completely.

Use **DISH SANI CHLOR** on dishes, china, glasses, plastic, silver and stainless steel flatware. Not for use on aluminum or other soft metals.

DISH SANI CHLOR oxidizes and bleaches soil and stain.

DISH SANI CHLOR works in hard or soft water.

DISH SANI CHLOR is the best choice for food service that needs the chlorine for low temperature dish washing.

DIRECTIONS

For cleaning tableware in low-temperature ware washing machines inject **DISH SANI CHLOR** into the final rinse water at a concentration of 200 ppm available chlorine. Do not exceed 200 ppm. Air dry. Please call your **OMEGA** Sales Rep if you have any questions on setting this up. **DO NOT USE ON SILVER OR SILVER PLATE.** To insure that the available chlorine concentration does not fall below the 200 ppm, periodically test the rinse solution with a suitable test kit and adjust the dispensing rate accordingly. Consult your local **OMEGA** Specialist for technical assistance and further information on sanitizing tableware in ware washing machines.

DO NOT MIX WITH ACID OR AMMONIA

NOTE: This product degrades with age. Use a chlorine test kit and increase dosage as necessary, to obtain the required level of available chlorine.
