

ICE MACHINE CLEANER

Nickel Safe Inhibited Liquid Acid

ICE MACHINE CLEANER is a fast-acting, lime scale remover for ice machine evaporators. **ICE MACHINE CLEANER** is formulated with corrosion inhibiting agents providing complete corrosion protection to sensitive components fabricated from NICKEL and TIN. Omega's **ICE MACHINE CLEANER** is a concentrated blend of non-fuming, exceptionally safe and effective acids. **ICE MACHINE CLEANER** is completely water soluble and can be diluted to any useful concentration.

DIRECTIONS

Follow the machine manufacturer's recommendation for scale removal. Before attempting to use **ICE MACHINE CLEANER**, turn off refrigeration, shut off water supply and remove all ice from the machine. Drain the sump and remove scaled components for hand cleaning. In a plastic pail, mix a solution of 5 to 15 ounces of **ICE MACHINE CLEANER** for each gallon of water and soak scaled components. For stubborn deposits, use a more concentrated solution and a soft brush. Refill the ice machine and add 5 ounces of **ICE MACHINE CLEANER** for each gallon of system water. Circulate the solution for 10 to 30 minutes, until all visible scale has been removed. When clean, drain the cleaning solution and flush the system thoroughly with fresh water. Install cleaned components and sanitize according to the manufacturer's instructions before returning the unit to service. Discard the first batch of ice. Phosphoric Acid Mixture. **VOC LESS THAN 25 GRAMS PER LITER AFTER MIXING & DILUTING.**

Areas of Use:

- *Cities & Counties
- *Hospitals
- *Apartments
- *Retirement Facilities
- *Hotels
- *Manufacturing Plants
- *Industrial Kitchens
- *School Districts

Appearance & Odor.....	Clear liquid with mild odor
Specific Gravity.....	1.127
Net Contents.....	5 US Gallons
