

MEGA ZYME

Concentrated Enzyme
Drain Cleaner

MEGA ZYME contains a powerful formulated blend of microorganisms, micro nutrients, and enzyme developed for use in bio-augmentation. These safe, non-pathogenic microbes produce a broad spectrum of effective enzyme systems which degrade organics such as starches, carbohydrates, proteins, animal and vegetable fats, oils and grease in waste streams. **MEGA ZYME's** multiple strains of bacteria enhance waste water biology and create a stable micro-ecosystem for excellent performance. Micro nutrients and growth stimulants are blended with the product to ensure rapid establishment in thriving colonies of waste degrading microbes in waste streams, WWTPs, plumbing, grease traps, drains and septic systems. The diversity of the bacterial, & enzyme systems make this an excellent product!

DIRECTIONS

MEGA ZYME can be flushed down the toilet or poured directly into the grease trap or sewage system. **Grease Traps:** For typical 1000 gallon trap with 2 to 4" of grease on top, break up the crust layer and prepare a shock treatment by slowly adding 10 to 13 pounds of **MEGA ZYME** to a 5 gallon bucket of warm water. Stir mixture until it is all dissolved. Treat inlet and outlet clean outs with 1/2 cup of the solution. Pour the remaining solution into the trap, replace the trap cover. **For Maintenance:** Mix 2 pounds of product with 1 gallon of warm water, directly to sink and floor drains twice a week to liquefy grease and maintain lines. Thereafter treatment may be reduced to once per week to maintain clean lines and to trickle new cultures into the trap. Note that if the grease trap has a large accumulation (6" or more of firm floatation) the grease should be pumped out before shocking for the treatment to be cost effective. **Sewage Systems:** Add 1 cup of product per 1000 gallon capacity initially and then maintain with 1/2 cup each month added by flushing down toilet bowls.

Health	0
Flammability	0
Physical Hazard	0
Protection	B

Areas of Use:

- *Hotels
- *Sewer Departments
- *Cities & Counties
- *Restaurants
- *Water Treatment Plants
- *Municipalities
- *Amusement Parks

Appearance & Odor.....	Brown solid with flour dust odor
Net Contents.....	2 lbs. and 50 lbs.
