Concrete & Mortar Dissolver

CMD is a biodegradable concrete and mortar dissolver that reverses the molecular bonding action of cement and turns it back into a loose mix of sand and aggregate that can be easily rinsed away. **CMD** is a liquid alternative to the heavy acids traditionally - used with no odors or fumes. **CMD** can be used to remove cured cement, concrete, mortar, grout or stucco off any surface. **CMD** will not harm paint, metal, or wood.

DIRECTIONS: Completely saturate area of hardened concrete to be removed with undiluted **CMD**. Surface will turn white on contact (if product dries do not rinse. Re-apply **CMD** to reactivate as needed until concrete has softened to a mush.) Allow to soak for 10 to 15 minutes. Re-Apply as necessary keeping surface wet. Concrete will begin to soften and release from surface. Use a stiff bristled brush to loosen if necessary and rinse with water. On extra thick buildup, repeat cleaning until build up has softened. **CMD** normally works in 10 to 15 minutes depending on the application. The amount of soak time will really depend on the thickness of the material trying to be removed. The minimum should be about 10 minutes, but thicker materials may take 30 or more minutes and or repeated applications. It is important to keep the surface wet with and not let it dry.

Health	2
Flammability	0
Physical Hazard	0
Protection	C

Areas of Use:

- *Hotels
- *Fleet Department
- *Cities & Counties
- *Road Crews
- *Stadiums
- *Ground Maintenance
- *Amusement Parks
- *Landscapers

Appearance & Odor.....	Colored liquid with typical odor.
Net Contents.....	1 Gal, 5 Gal.
