

DYE AWAY

Stain and Kool-Aid Remover

DYE AWAY is a safe to use product that can be used on fabrics, carpeting, or clothing to instantly remove food grade dye stains. **DYE AWAY** can be used for treating carpet and fabric for the presence of cranberry juice, Kool-Aid, fruit punch, shoe polish, cough syrup, latex paint, wine, chocolate, dirt, grease, and soft drinks.

Test all products in an inconspicuous area for desired results prior to using

DIRECTIONS: Check stain for residue from inferior cleaners if present, rinse completely before starting. Blot dry if needed. Apply **DYE AWAY** directly from bottle to stained area. Allow to soak for a few seconds before starting. Next, lay a moist 100% cotton white towel or wash cloth over stained area. Fill your normal household steam iron with plain tap water. Set iron at lowest heat setting (that will produce steam.) Note: Higher heat does not speed up the process, it slows it down and sets the stain. Set the preheated iron on top of the towel directly over the stained area. Do not apply pressure. Use the weight of the iron only. Allow iron to set on towel until it starts to boil around edges. This usually take approximately 20-40 seconds. When boiling starts apply pressure to handle of iron and hold firmly on towel for about 10 seconds, then lift iron and towel, check for transfer, shift iron to clean moist area on towel and repeat if necessary.
